

Company presentation

Desind was founded in 2013 by Vasilis Vasiliou after working for about 10 years in the architectural building systems sector. He worked at Alumil (www.alumil.com) as Product Manager in the R&D department and established a new design process based on the project management principles.

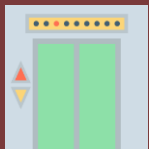

At Desind we have worked in various projects that helped us expand our knowledge and expertise.

Architectural building systems and accessories
Opening , sliding , curtain wall , lift-slide , folding , balustrade

Special machine for industrial use

Elevator parts

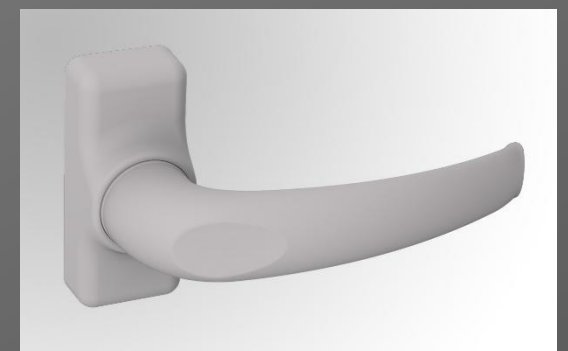

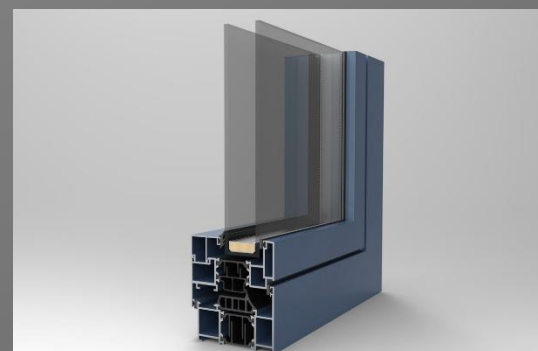

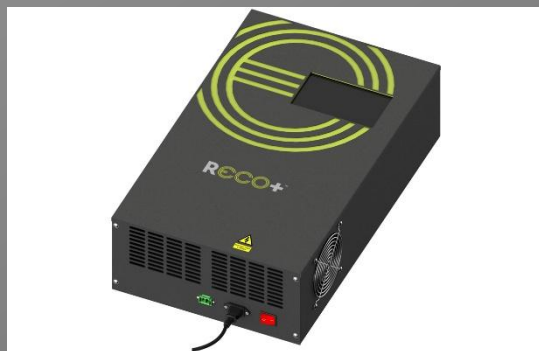

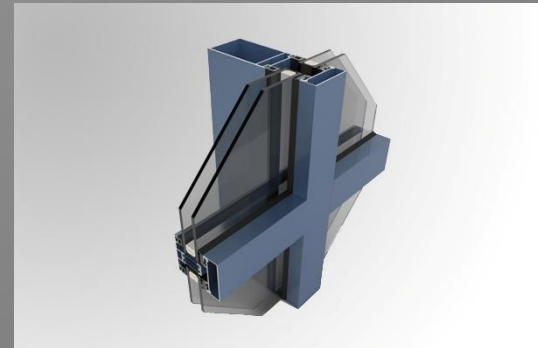

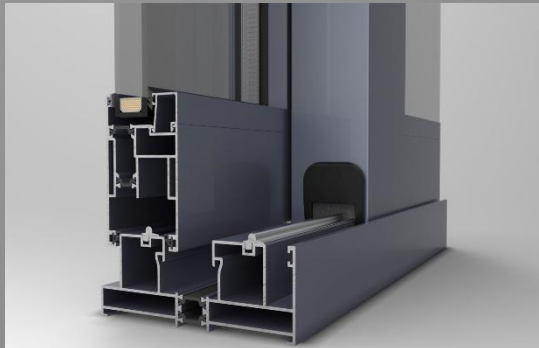

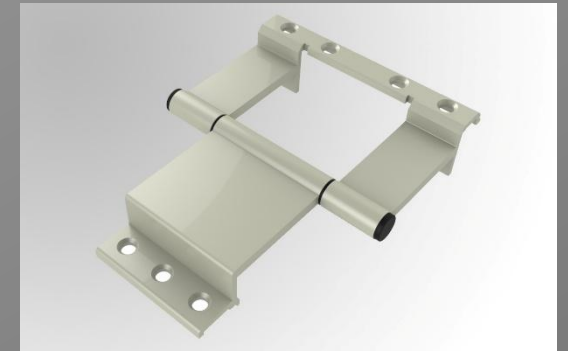

SERVICES

Our services include:

- **Product development**
- **Mechanical design**
- **Prototyping**
- **R&D services**
- **Technical documentation**

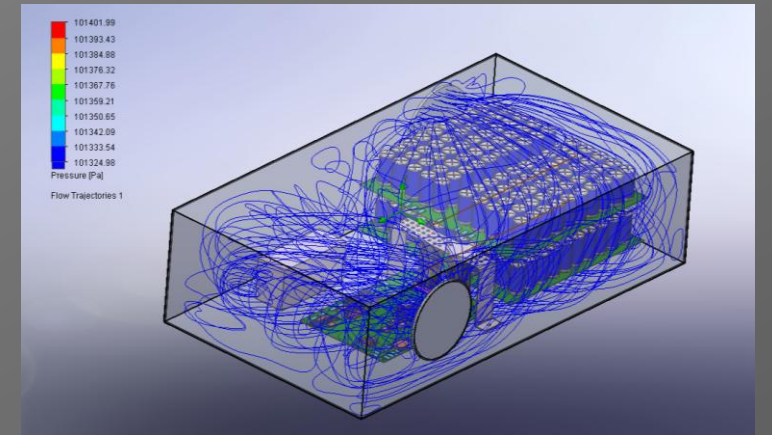

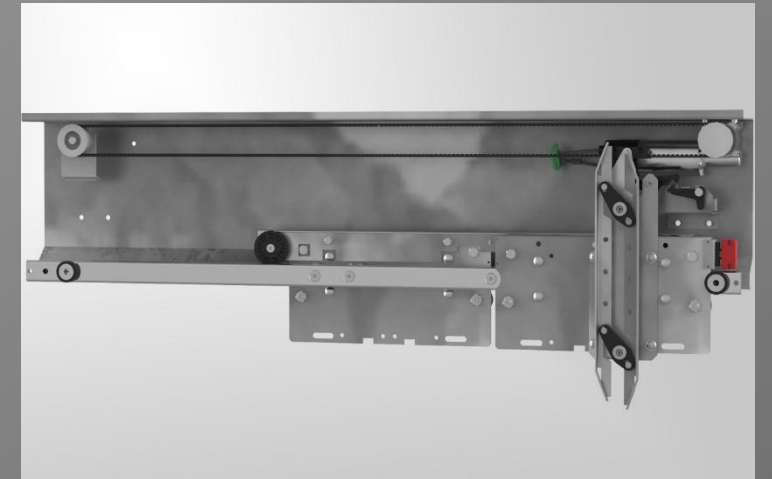

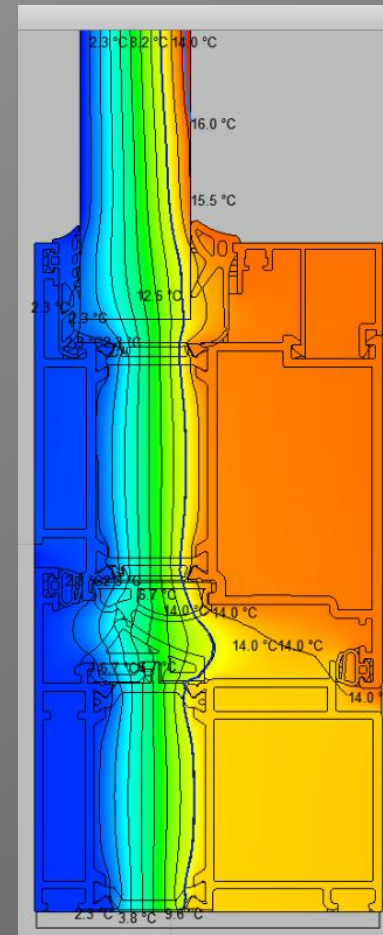

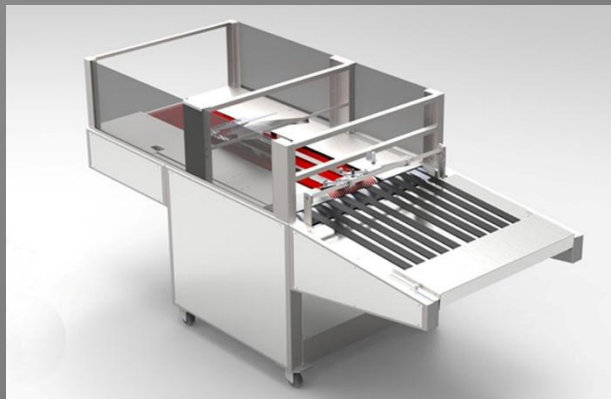

Product development

- Industrial design
- Aluminium building systems
- Accessories and fittings
- Consumer products

Mechanical design

- Machine design
- FEA
- Accessories and parts
- Simulations

Prototyping

- 3D printing
- CNC milling
- Vacuum casting
- Small productions

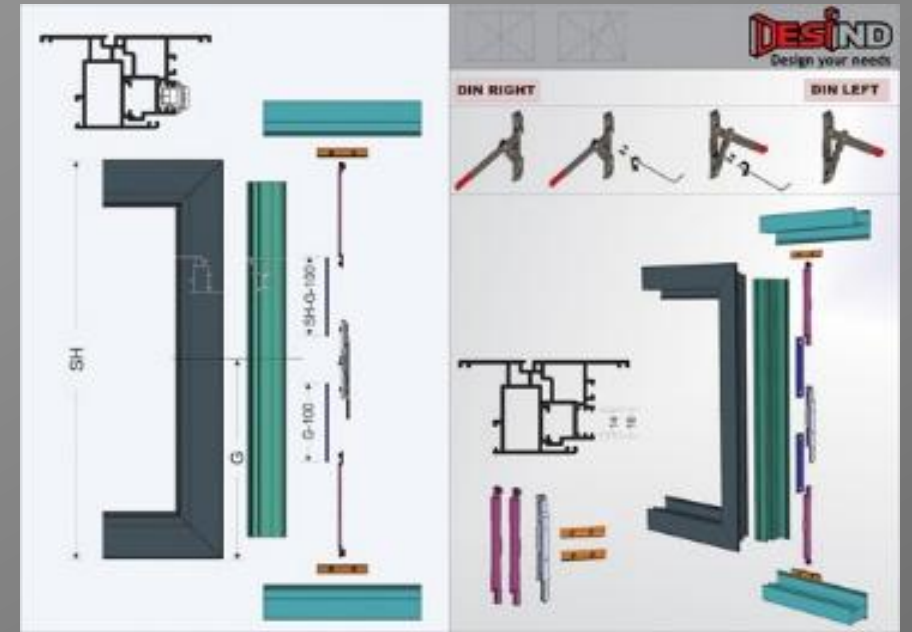

R&D services

- Consulting
- CAD automations
- Market research
- Innovation management

Technical documentation

- Technical catalogs
- Product catalogs
- Assembly instructions

How we work

- Project management
- Design for Manufacture
- Innovative solutions
- Quality
- Sustainability

Define

- Background
- Set your aims for the project intervention
- Develop objectives to achieve the aims
- Identify a high level timescale (key stages and milestones of the project intervention)

Design it

- Plan to achieve the project objectives
 - Estimate the time you require
 - Prepare intervention timetable and cycle of events
 - Identify constraints & dependencies
- Select appropriate actions to add value to the working relationship
- Prepare to track & capture detail of events

Do it

- Plan events and activities including Preparation time pre-event
- Carry out activities
- Reflection/Action time post event
- Capture & record data
- Provide feedback / timely responses
- Review progress against plan

Deliver it

- Test the service/product - gain appropriate feedback
- Measure the outcomes against the project objectives
- Refine the aims and build into next cycle of events
- Learn from the project and build into practice
